

## Why Choose LMG?

LMG Group LLC is an international organization that utilizes and develops the most up-to-date software technologies to manage complex litigations, government inquiries, corporate investigations, mergers, and acquisitions. LMG was launched in 1999 and brings a decade of unparalleled and unique consulting, management, and technology solutions. We utilize our various business groups to bring efficient solutions to our clients.

Our portfolio of solutions includes litigation consulting, project management, identification of data, forensic collection of data, electronic processing of data, and document review and hosting solutions. Our domestic and international presence paired with our dedication to excellence and technological advancements has made LMG a leading provider of litigation support services worldwide. We guarantee unparalleled levels of service, quality, and professionalism. Our mission is to offer and guarantee quality, service, and flexibility unmatched in today's rapidly changing business world.

**"Relativity is a leap forward in document review solutions. The people at kCura are straightforward and willing to go above and beyond for their clients' success. Those are two reasons I trust and rely on their experience."**

*Mary Pat Poteet,  
Director of Litigation Support,  
DLA Piper*

# Document Review and Hosting Solution: kCura Relativity

***Relativity is a complete review solution that has the power to handle the largest and most complex projects, and the ease-of-use to let you focus on documents instead of technology.***

## Flexibility

Relativity has established a new standard for flexibility among review platforms. Case teams have the ability to design custom workflow rules and best practices to minimize the likelihood of inconsistent review decisions. Whether collaborating with multiple parties or designing a complex multi-stage review utilizing in-house resources, Relativity allows you to create, manage, and audit a process that meets your team's needs. Users can also create custom database structures outside of the Relativity review workflow and link them to documents and information in the review database to manage pleadings and court documents, track activities related to the case (such as training, time sheets, chain of custody etc.), develop timelines, and much more. Combined with its world-class scalability, Relativity deftly manages the massive, complex data collections faced by case teams today by giving case teams unparalleled information management capabilities.

## Security

Relativity employs a highly granular security architecture that controls the user environment. Case administrators set permissions by user and user groups. Security can also be set to limit access to one document, a group of documents, data fields, redactions, highlights, annotations, TIFF on the Fly, and printing. Reviewers can be locked down by IP address, limiting access outside a controlled environment. Relativity allows the same collection of data to be viewed in a limited format for expert review or in an expanded format for the case team, eliminating the need for multiple iterations of the same database.

## What Benefits Does Relativity Offer?

A feature-rich online review application, Relativity provides image and native file review, powerful searching, diverse coding options, flexible workflow capabilities, integrated productions, Unicode and foreign language support, and concept searching, all delivered in a highly scalable solution. Users can view and search hundreds of native document formats, with the ability to TIFF, redact, and produce records inside of the application. Relativity's granular security model allows case teams to construct workflows for different reviewers and review groups, ensuring users see the records and make the decisions that are relevant to them, thus ensuring quality, speed, and efficiency of the review with minimal training requirements.
